Quick Tips to Improve Your Home Internet Experience

Here are a few simple ways you can enhance your home internet performance, especially during peak times:

Cut the Cameras

Only use video conferencing for those must-see moments. If video conferencing is the preferred way to meet for your job, try service-saving hacks like only turning on your camera when speaking and lowering your video resolution, or using audio-only.

Keep it on the Low

Do you have a doorbell camera or other security cameras around your home? Consider lowering the resolution while you're home. You can adjust settings and reduce the resolution yet still effectively monitor the areas.

Get a 360 View

View and manage devices on your home internet from the Panoramic Wifi app. You can turn the kids' iPads off when they've reached screen time limits or pause their wifi when you're on an important video call. Find it in your favorite app store.

Mind Your Network Health

Computer viruses and malware can slow down your home internet. Click here to learn more about using your Cox Security Suite Plus powered by McAfee. Panoramic Wifi customers can also turn on Advanced Security in the Panoramic Wifi app.

Network Safety First

Double check that your home internet network is password protected and no one else but your family is using it.

Microwaves Matter

Did you know your internet experience could be slowed down if your wifi router is near a microwave, a fish tank, or mirror? Learn more wifi pro tips here.
